|-------------------------------------|---|---|--|--|--|
| Cost (based on 6-8' tree) | \$1.44* | N/A for 6-8' trees \$2.30 for <4' only | \$6.15* | \$13.50* | \$16.99* |
| Cost with Water Bowl | \$3.16* | water basin molded into stand | \$9.10* | water basin molded into stand | \$18.71* |
| Ease of Installation | hammer & nails some effort required | simple, Doweler tool required | drill straight hole & drive spike in, drill machine recommended | turn screws to tighten onto tree, no machines | tap/bolt tree onto base, turn crank/bolt, no machines |
| Tree Sizes | table top to 15'+ | small trees only | table top to 15'+ | table top to 12'+ | table top to 20'+ |
| Adjustable | no | no | yes | yes | yes |
| Removable | no | yes | yes | yes | yes |
| Notes & Comments | useful for in home or sales display, with or without bowl | simple and efficient way for standing small trees | useful for in home or sales display, with or without bowl, or in concert with display spikes | Can be sold as a retail item, or pre-installed on trees. | more expensive but simple to install and great for large trees |

*Prices listed above may vary somewhat each year, but are intended to offer general comparison

Tree Sales Display Systems

The display systems below are for showing trees to the public for sale. Each one allows trees to be easily added and removed from the fixed display (with water), and a tree stand for home use can be added at the point of sale.

Display arms attach to 2x4 or 2x6 lumber which can be arranged into a variety of patterns to display trees. Trees clamp on for display and water bowls can be placed on the ground to keep trees fresh.

Grid pins and **Spike plates** attach to 2x4 or 2x6 lumber which can be arranged into a variety of patterns to display trees. Trees must be drilled to mount on the spikes, which will also accommodate rebar stands at point of sale. Rebar water bowls can be used to keep trees fresh.
